

27. ENERGY AUDITING

IEEE student branch College of Engineering Karunagappally in association with the IEEE PELS/ NPSS SBC CEK conducted an energy audit in the nearby houses on September 17 evening 4 pm. The main aim was to make the people understand how to conserve energy. Firstly by analysing the energy use of a family, then what are the main electronic equipments used in that house which causes high energy use were made understood. Thus getting an overview of the energy use of the family we were able to advise some effective methods to refuse the high energy usage and thereby energy conservation can be made possible. An effective teams for IEEE members led by our chapter chairman Mr Akhil Ahammed took this initiative and was a huge success. The family we visited were very satisfied.
